

Avatar Studio Student Art Parts Challenge

Create polished avatar spare parts that can plug into the Career Empire Avatar Studio.

[Open the live non-login preview page](#)

Scan or click to see where your work will plug in.

What this is

A real production brief for student-created avatar parts. The studio already works, but it needs a better library of clean, inclusive, matching art layers.

Best first contribution

Choose one small pack - for example one hairstyle in several colours, one accessory set, or one complete outfit layer set - and make it neat enough to plug in.

Current live target

Full-canvas transparent PNGs on a **1280 x 720 px** canvas. Do not crop tightly around the item.

Project fields: Student/team name _____ Class _____ Due date _____

The Project

Students are being invited to help build the identity layer of Career Empire. Their art will become selectable avatar parts for future-self profiles, shop unlocks, career planning, interview practice, dashboards, and teacher-visible evidence.

Production mindset

This is not a random character drawing task. Avatar parts must work like transparent layers: same canvas, same position, same style, and no unwanted background.

Already created

- Working Avatar Studio page and save flow.
- Live non-login preview for students.
- Take 2 boy stack on a 1280 x 720 transparent canvas.
- Smooth neutral base, pants, shirt and tie, blazer.
- Black and brown shoes.
- No-hair, brown hair, and black hair options.
- Planned buttons for future hair, skin, eyes, outfits, and accessories.

Still needed

- More hair styles and colour packs.
- Girl/skirt-presentation starter pack.
- Eye colour overlays and face details.
- Glasses, earrings, name badge, scarf, headphones, backpack.
- Summer uniform, sports kit, interview outfit, scrubs, hi-vis, apron.
- Career gear and shop unlocks tied to learning goals.

The live preview page

Start here: <https://emmanuel-ict-support.github.io/GTCCEM-Career-Empire/modules/avatar/index.html>

Open the page before designing. Your part should look as if it belongs on that avatar and in that game world.

What Students Hand In

Each student or team should submit one small, complete asset pack. Small and polished is better than large and messy.

Deliverable	What to submit	Why it matters
1. Final PNG layers	Separate transparent PNGs. Use 1280 x 720 px for the current Take 2 studio. Full canvas, already aligned.	This is what can be plugged into the studio.
2. Preview composite	A screenshot or contact sheet showing the part stacked on the base avatar.	Shows whether it works visually before code integration.
3. Source file	PSD, AI, SVG, Procreate, Canva, Krita, Clip Studio, or other editable layered file if available.	Lets the teacher/developer adjust alignment later.
4. Asset notes	Student/team, part name, base, canvas size, colours, known issues, suggested button label, free or shop unlock.	Makes the submission easy to review and catalogue.

File naming examples

hair-front-crop-black-v1.png	accessory-glasses-round-black-v1.png
hair-back-long-brown-v1.png	uniform-sports-kit-shorts-v1.png

Suggested submission folder

avatar-submission / final-png-layers / preview-composites / source-files / asset-notes.txt

Choose One Useful Pack

Pick one lane. The goal is to make one part of the avatar library genuinely usable.

Hair pack One hairstyle in 3-6 colours. Best first choice: crop, curls, long, bun, wrap, or protective style.	Face detail pack Eye colours, freckles, glasses, earrings, or a name badge. Must align to eyes, ears, and nose.
Uniform pack One complete outfit set. Avoid isolated clothing that leaves gaps at neck, waist, cuffs, or shoes.	Career gear pack Scrubs, hi-vis, apron, interview blazer, tool belt, laptop bag, or work boots tied to a career pathway.
Girl/skirt starter pack A clean matching starter pack: base, hair, uniform, skirt/tights/shoes, and core face details.	Shop unlock pack Accessories or items students could earn later through gameplay, savings, or teacher-reviewed requests.

In scope

- Create new hair, clothing, accessory, face-detail, or career-gear layers.
- Use the supplied base as an alignment guide.
- Suggest button labels, unlock names, and shop categories.
- Test visually against the live non-login Avatar Studio page.

Out of scope

- Do not change the code or redesign the whole avatar system.
- Do not submit flattened full-character drawings when only one part is requested.
- Do not crop the canvas tightly around the item.
- Do not use copyrighted characters, celebrity likenesses, brand logos, watermarks, unsafe content, or ranking of physical features.

Technical Rules

These rules are what make the artwork usable. If a part breaks these, it may look good on its own but still fail inside the studio.

Rule	Requirement
Canvas	Use 1280 x 720 px for the current live Take 2 studio unless assigned a different rig.
Background	Transparent PNG. No white box, checkerboard, label, watermark, crop edge, or shadow.
Position	Keep the avatar in the same place. Export the part on the full canvas.
Content	The file should contain only the named item plus needed hidden overlap pixels.
Style	Match the soft 3D ECC student-guide style: lighting, perspective, colour, and softness.
Scale test	Must read clearly at full studio size and small dashboard-card size.

No-gap overlap rules

- Hair covers the forehead cleanly and tucks behind ears, collar, or shoulders where needed.
- Shirts and jumpers tuck under blazers. Trousers, skirts, and shorts tuck under tops.
- Shoes slightly cover trouser hems, socks, or tights.
- Glasses align to the eyes and nose bridge, not just the bounding box.

Ready-to-accept checklist

- ☐ Correct full canvas and transparent background.
- ☐ Stacks cleanly on the current base.
- ☐ No stray pixels, labels, background, or unwanted duplicate body parts.
- ☐ Looks like it belongs in Career Empire.
- ☐ Includes final PNGs, source file if possible, preview composite, and asset notes.

Teacher Handover Pack

Hand students a simple pack so they do not have to guess what to build or where it fits.

- Live preview link: Avatar Studio non-login page.
- Current neutral base image.
- Existing approved layer examples: pants, shirt and tie, shoes, blazer, brown hair, black hair.
- Blank 1280 x 720 transparent canvas template.
- Dark background test image for checking stray pixels and rough edges.
- Submission folder template and this PDF brief.

Suggested milestones

Milestone	Student action	Due date
1. Choose a part	Pick one focused pack: hair, accessory, outfit, face detail, girl starter pack, or career gear.	_____
2. First draft	Submit rough PNG layer, preview composite, and short polishing note.	_____
3. Alignment check	Teacher/developer checks canvas, transparency, position, gaps, and small-size readability.	_____
4. Final submission	Submit final PNGs, preview composite, source file, and asset notes.	_____

Final student prompt

Open the live preview, choose one missing piece, and make it production-ready. The best submission is the one that fits perfectly, looks like it belongs, and gives future students more ways to represent themselves.
